

Actionable data from the point of risk

Overview

SafetyCulture, the creators the world's leading inspection platform, iAuditor. iAuditor provides a single operating system for your inspections and deep insights into safety and quality across your locations.

Mobile app Inspection app for teams

The iAuditor mobile app and web platform team up to provide a single operating system for your inspections. Manage multiple business locations easily, gather better data, create and resolve corrective actions - and gain insight into critical areas.

Web platform Your control center

Manage multiple business locations in real-time with instant visibility. At a glance insight into inspection results, corrective action items due, frequently failed areas, analytics, and schedules.

Mobile form creation Build customized shareable forms

Standardized forms help you collect better data to make informed decisions. No IT help is required for workers to get up and running.

Instant reports Professionally designed reports

Create PDF, Excel, CSV reports and more from the inspection data. Share reports via a web link, automatically archive it or send in an email.

Corrective actions

Fix small issues before they become big

Create correction actions from the web platform or mobile app. Send notifications, issue reminders and monitor task completion.

Schedule inspections

More inspections completed on time

Send inspection schedules directly to the worker's device. Create recurring inspections, set the timeframe, and assign it to a group or individual.

Failed area insights

Know what to improve before it becomes critical

Set failed responses to trigger an alert when it fails. Get a bird's-eye-view of frequently failed areas to understand the problem.

Detailed analytics

A snapshot overview or drill into detail

Visual dashboards provide performance information in real-time. Track inspection frequency, scores, and group or individual performance.

Roles & Permissions

Limit the permissions of team members

Role-based access control within iAuditor allows you to control who sees mobile forms and results. Provide your workers with only the information they need.

Integrations & API

Gain even more valuable insight by using our integrations and API

Send data from iAuditor to your own systems. Extract data or feed it into a business intelligence solution.

"Since introducing iAuditor it makes it a lot more efficient to react and deal with issues that occur on our sites."

Les Jones, SHE Manager, Pochin

"iAuditor helps us to empower our team members to own safety and keep quality to a high standard."

Maren Schroeder, Head of Technical, VROON
